Press Release

ML 643, the new vial filler/capper perfect for the packaging needs of pharmaceutical, cosmetic and nutritional industries

Presentation

The new *ML 643* showcased at **Achema** is a linear vial filler/capper with alternating motion. The linear design makes it an **ergonomic machine**, which is easy to clean and service, plus operators have a **complete view of each processing phase of the cycle**, from filling through to vial capping/crimping. The *ML 643* is **incredibly versatile** and is consequently the perfect solution for pharmaceutical liquids, for which the laminar flow can be setup, but also for the cosmetic and nutritional industries. The machine can output 100 pieces a minute and can process vials from 100 ml to 200 ml.

Technical features

The filling station can be equipped with six stainless steel or ceramic rotary piston pumps, which may be the removable or the CIP/SIP type, or even with mass flow meters and dosing nozzles with valves.

It may have one or two capping stations for screw-on, press-on or crimped caps. The capping unit exploits two brushless motors to be able to control the screwing torque with utmost precision.

A pick-up robot in the capping station cuts down on the number of size parts to be replaced and consequently also size changeover times, sometimes even eliminating them totally if the cap does not change.

The ECO200 cap feeder or commercial cap feeding systems can be installed (such as circular vibrators or mechanical feeders).
